

# STEM-KINE™

Renew • Replenish • Rejuvenate

Item #1655 – 60 Vegetable Caps

**Directions:**

Take 2 capsules once or twice a day.

Supplement Facts	
<b>Serving Size: 2 Capsules</b>	
<b>Servings Per Container: 30</b>	
Amount Per Serving	% Daily Value
Vitamin D3 (as cholecalciferol) 2,000 IU	500%
Proprietary Blend: 1.4 g †	
L. fermentum extract, Pomegranate Extract (Punica granatom) 40% Ellagic Acid, Beta 1,3 Glucan	
† Daily Value not established	

**Other Ingredients:** Vegetable capsule (hypromellose, water), magnesium stearate.

**Key Benefits:**

- Supports the body's stem cell production\*
- Nutritionally supports bone marrow to produce more adult stem cells\*

**What is it?**

Stem-Kine is a unique supplement made with all natural ingredients and vitamin D through a proprietary fermentation process. Stem-Kine was formulated by an expert in the field of stem cell research to nutritionally support the metabolism of bone marrow enabling it to produce more stem cells. By doing so, your body will have a greater ability to restore and rejuvenate itself.

**What are Stem Cells?**

Circulating through the body of every person of every age, are millions of new cells, produced and released primarily from bone marrow, known as stem cells. Unlike other cells in the body, such as liver, heart, or brain cells, stem cells are early-stage undifferentiated cells that have not yet grown into a specific cell type. Stem cells constitute the body's natural repair and rejuvenation system.

When you are young you produce a large amount of stem cells, but after age 25 the amount you produce continuously drops. Studies have shown that the more stem cells you have, the more effective is your ability to renew, repair, and slow down the signs and symptoms of aging.

Stem cells have an important function. They identify tissues that need to be replaced, infiltrate the damaged tissue, transform themselves into that particular tissue cells, and generate new healthy tissue cells. For example, stem cells can create new liver cells, brain cells, bone or muscle cells. Stem cells are a vital part of the body's effort to naturally achieve optimal health.

Years of scientific research world wide has shown that a higher number of circulating stem cells is associated with a higher level of good health. People with higher stem cell levels show increased mobility, faster hair and nail growth, a healthy complexion, an increase in energy and a general sense of well-being.

**The Development of Stem-Kine**

A stem cell research scientist developed Stem-Kine, and a 14 day human clinical pilot study was conducted with six subjects taking two capsules in the morning and two at night. Stem cell levels rose to a 100% increase over a period of two weeks!
